Quarterly Report

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 31st March, 1958

REPORT

Summary.—In this quarter there were 25,101 births or 19·7 per 1,000 of the population. Excluding the years following the war, which were exceptional, the rate is higher than for any first quarter since 1931.

The marriage-rate was 8·5 per 1,000 of the population, 0·4 less than in the first quarter of 1957 and 1·0 less than the average for 1953-57.

There were 18,621 deaths in the quarter or 14·6 per 1,000 of the population. This compares with 12·7 in the first quarter of 1957, which was exceptionally low for a first quarter. The average over the five years 1953-57 was 14·2.

There were 746 deaths in the quarter due to causes other than natural causes. 355 of these deaths were due to accidents in the home. Of these fatal accidents in the home, falls, involving the deaths of 46 men and 101 women mostly over 75 years of age, were the principal cause. 78 were due to gas poisoning and these, too, were mostly of elderly people. 53 were caused by suffocation and all but 5 were of children under one. Burning and scalding accidents, involving 51 persons, were the other main cause of accidental deaths in the home.

Transport accidents caused 159 deaths in the quarter. 142 were road transport accidents, involving the deaths of 86 pedestrians, 13 motor cyclists and 5 pedal cyclists.

Deaths from tuberculosis were 229, or 18 per 100,000 of the population. The rate is 1 per 100,000 higher than in the first quarter of 1957 and 7 per 100,000 below the 1953-57 average.

There were 15 maternal deaths or 6 for every 10,000 live births. This is 2 per 10,000 more than in the first quarter of 1957 and 1 per 10,000 below the 1953-57 average.

Live Births.—The 25,101 births in the quarter under review are 342 more than in the corresponding quarter of 1957. The rate per 1,000 population is 19·7, being 0·2 above the rate for the first quarter of 1957 and 1·0 above the average. The birth-rate in the cities is 20·1 and in the large burghs 21·5. These compare with 18·8 for the rest of Scotland.

In individual areas the rate ranged in the cities and large burghs from 28·5 in Dumbarton, 26·7 in Coatbridge and 25·9 in Port Glasgow, to 17·8 in Aberdeen, 17·7 in Rutherglen and 16·4 in Edinburgh. In counties, exclusive of cities and large burghs, it ranged from 23·0 in Caithness, 21·8 in West Lothian and 21·5 in Kinross to 13·0 in Selkirk, 12·1 in Orkney and 11·4 in Sutherland.

EXPLANATORY NOTES

Correction for Residence.—Births, Stillbirths and Deaths are corrected throughout this Return by transfer where necessary to usual place of residence, if in Scotland, but Marriage figures are as registered.

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population in Scotland or of the local area concerned, as the case may be, as at 31st December, 1957.

Average Rates.—Unless otherwise indicated, any reference in this Report to the average rate or the average refers to the average of the rates in the corresponding quarters of the previous five years.

The proportion of illegitimate births, 4·1 per cent, is 0·3 above that for the first quarter of 1957 but 0·1 below the average rate.

Of the 25,101 births registered, 12,843 were of male children and 12,258 of female children, being 1,048 male births per 1,000 females. Births registered in January numbered 8,642, in February 7,768, and in March 8,691, the equivalent birth-rates being 19·7, 19·6 and 19·8 respectively.

Stillbirths.—The number of stillbirths registered during the quarter was 614 and is equivalent to a rate of 24 per 1,000 total births (including stillbirths), which compares with 25 per 1,000 in the first quarter of 1957.

Marriages.—The number of marriages registered in the quarter was 10,877, 402 less than in the first quarter of 1957. The rate per 1,000 population is 8·5; this is 0·4 below the rate for the first quarter of 1957 and 1·0 below the average rate.

In considering the figures given in Table I it should be remembered that many marriages of persons, one or both of whom are resident in rural areas, are contracted in neighbouring cities or towns. Thus an area to area comparison is unreliable. While it is true also that births and deaths often occur in hospitals away from the place of residence the figures, unlike those for marriages, are so adjusted as to relate to the place of residence (a similar adjustment is not possible for marriages as two residences are involved.)

10,877 marriages were registered in this quarter. 8,849 were solemnised by a minister of religion. 2,027 were civil marriages contracted in registrars' offices. One was an irregular marriage registered on the authority of the Court of Session.

Corresponding figures in the first quarter of 1957 were 9,346 marriages with a religious ceremony, 1,932 civil marriages and one irregular marriage.

Of the marriages registered in the quarter, 1,982 were registered in January, 2,850 in February and 6,045 in March.

Deaths.—18,621 deaths were registered in the quarter giving a death-rate of 14·6 per 1,000 of the population. They were 2,446 higher than in the first quarter of 1957 and the rate is 1·9 per 1,000 of the population higher than in that quarter and 0·4 above the average rate.

The rate in the four cities was 15·2 and in the large burghs 14·0. These rates compare with 14·5 in the rest of Scotland. The rate in individual cities and large burghs ranged from 16·9 in Rutherglen, 16·1 in Paisley and 16·0 in Hamilton to 12·4 in Motherwell and Wishaw, 12·0 in Clydebank, and 10·6 in Port Glasgow. In counties exclusive of cities and large burghs it ranged from 21·9 in Bute, 20·0 in Argyll and 19·7 in Sutherland to 13·0 in Aberdeen, Lanark and Moray, 12·7 in West Lothian and 11·7 in Stirling.

Deaths registered in January numbered 6,789, in February 5,746 and in March 6,086.

Infant Mortality.—Deaths of children aged under one year numbered 794 and are equivalent to an infant mortality rate of 32 per 1,000 registered live births. This rate is the same as that for the corresponding quarter of 1957 and 2 below the average. The mortality was 31 per 1,000 births for legitimate children and 38 for illegitimate children.

The infant mortality in the cities is 33, in the large burghs 32 and in the rest of Scotland 30. In the cities and large burghs individually it ranged from 59 in Dunfermline, 53 in Hamilton and 51 in Greenock to 16 in Perth and Stirling, 15 in Coatbridge and 12 in Falkirk.

In counties exclusive of cities and large burghs it ranged from 75 in Peebles, 54 in Sutherland and 53 in Kinross to 14 in Inverness and Kirkcudbright 13 in Berwick, and 6 in Clackmannan and Roxburgh.

The neo-natal rate (deaths of infants under 28 days) is 19 per 1,000 live births and is the same as that for the corresponding quarter of 1957.

Causes of Death.—Principal Epidemic Diseases.—There were 89 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 29 more than in the first quarter of 1957. The death-rate for this group is 7 per 100,000 of population. The average rate is 12. These deaths include 3 from whooping cough, 7 from meningococcal infections, and 79 from influenza. There were no deaths from typhoid fever, scarlet fever, diphtheria and measles. 15 of the cities and large burghs had no deaths from the principal epidemic diseases and in the rest of Scotland 14 counties had none.

One death from acute poliomyelitis was registered. There were three deaths from this cause in the previous quarter and none in the corresponding quarter of 1957.

Tuberculosis.—There were 229 deaths from tuberculosis, 11 more than in the first quarter of 1957. 219 were from tuberculosis of the respiratory system and 10 from other forms. The death-rate from all forms is 18 per 100,000. From respiratory tuberculosis it is 17. Both rates are one above those for the corresponding quarter of 1957, and 7 and 6 respectively below the average.

Malignant Disease.—Deaths under this head were 2,667, 120 more than in the first quarter of 1957, and the rate is up by 9 to 210 per 100,000.

Respiratory Diseases.—Deaths from bronchitis numbered 1,001 and from pneumonia (excluding pneumonia of the newborn) 883. The corresponding death-rates per 100,000 population are 79 and 69. The average rates are 67 and 53 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 15 (a rate of 0.6 per 1,000 live births). This rate is 0.2 above that for the corresponding quarter of 1957 but 0.1 below the average. Including stillbirths the maternal death-rate is 0.6 per 1,000.

Violence.—Deaths due to causes other than natural causes numbered 746, and are equivalent to a death-rate of 59 per 100,000 of the population. In the first quarter of 1957 the number was 694 and the rate 55 per 100,000 of the population.

355 of the deaths in the first quarter were from accidents in the home. The numbers are subdivided by causes, broadly grouped, and by sex and age, in the following table.

CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at National Insurance Offices of the Ministry of Pensions and National Insurance in Scotland during the 13 weeks ended 1st April, 1958, was 289,125. The number of such claims made at the 17 principal towns is shown below.

Town	New Sickness Benefit Claims in the 13 weeks ended 1st April, 1958	Town	New Sickness Benefit Claims in the 13 weeks ended 1st April, 1958
1. Glasgow	83,936	10. Dunfermline	4,482
2. Edinburgh	24,709	11. Clydebank	6,148
3. Aberdeen	9,929	12. Ayr	4,500
4. Dundee	9,969	13. Kilmarnock	4,073
5. Paisley	8,296	14. Perth	3,066
6. Greenock	7,166	15. Hamilton	9,086
7. Motherwell and Wishaw	10,135	16. Falkirk	4,447
8. Kirkcaldy	4,380	17. Airdrie	3,326
9. Coatbridge	5,581		
			<hr/> 203,229 <hr/>

These figures represent the number of new claims made at Ministry of Pensions and National Insurance Offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

JANUARY, 1958

Mild in the first half and toward the end of the month, but one very cold period intervened with severe frost and heavy snowfall. Mean temperatures for the month were from one to three degrees below average. Totals of precipitation and sunshine were variable.

After a few days of cold weather, a mild southwest type set in on the 4th and continued until about the 17th with strong gales at times, especially on the night of the 8/9th. In the mild period day readings were mainly in the 50°-60° range but dropped to 30°-40° generally during the cold weather from the 18th-25th. In some places frost persisted all day. It became milder in the last week with maxima of 55°-60°. The mildest days were the 15th and 27th, the thermometer reaching 62° at Onich and 61° at Coatbridge on the latter date. The lowest night minima were minus 7° at Grantown-on-Spey, minus 6° at Kincaig and minus 5° at Braemar—all on the 25th. On the ground temperature fell to minus 8° at Balcladaich (Cannich) and at Glenlivet on the 24th and to minus 8 and minus 6 respectively at Braemar and Dyce on the 25th.

The month appears to have been a dull one at stations round the Moray Firth but elsewhere records were good for the month of January. The sunniest places lay on the East Coast; St. Andrews with 69 hours topping the list, followed closely by Edinburgh (68 hours), Dunbar (68 hours), Arbroath (66 hours), Leuchars (65 hours) and Longforgan, in the Dundee area (65 hours).

North and Northeast districts and the coastal fringe in the west had considerably more than the usual January precipitation. Elsewhere there was an appreciable deficiency, small areas in Fife and East Lothian having less than half the average. There was a good deal of snow and sleet in the first half of the month and blizzards occurred between the 18th and 25th. Roughly, the snow fell to a depth of 3-6 inches but exceeded a foot in some north and northeast counties which were the hardest hit. There traffic was brought to a standstill and farms and villages were isolated. Two trains were trapped in drifts. A rapid thaw set in with the onset of very mild weather on the 25th, and heavy rain and thawing snow caused flooding in places. Amongst noteworthy daily falls for the month were 2.40 inches at Ardnadam (Dunoon area) and 2.83 at Dunoon Water Works on the 8th. Ardnadam had 2.45 on the 25th and Strathyre 2.42 on the 28th.

There was a good deal of fog, especially around the 14th-16th. Thunder was heard at one place or other on 14 days. Gales were severe at times causing damage ashore and at sea. On the 17th, wind speed rose to 94 miles per hour at Grimsetter Airport, Orkney, and to 93 at Tiree on the early morning of the 9th.

Meteorological Notes—continued**FEBRUARY, 1958**

A mainly dull, cold month with heavy snowfall, but mild periods. Total precipitation variable.

The month opened with temperatures in the 50's, the 4th being the mildest day of the month in some districts. Cold North winds on the 6th-9th lowered day readings by 10° - 15° and caused severe frosts at night. Around the 16th there were a few days of low temperature, but milder weather followed, the 20th being the mildest day for February in some places. Temperature was moderate in most parts of the country in the last week. The highest readings were 56° at Dyce and Logie Coldstone and 55 in a number of East Coast districts on the 4th. In contrast, frost persisted all day on the 6th at Dalwhinnie and Glenlivet. Overnight frosts were severe on the 6th-10th, the lowest minima being minus 2 at Achany (Lairg area) on the 7th and zero at Logie Coldstone on the 7th and 8th. The lowest readings on the ground were minus 5 at Balcladach (Cannich area) on the 7th, and minus 1 at Braemar on the 9th. Mean temperatures for the month were below average by 1° - 3° in most places, the mean value (37.6°) for the principal towns being 1.4° below average.

Sunshine records were poor for February especially in Moray Firth districts where totals were 30 hours below average in places. In some Northern districts, however, there was more than the seasonal amount of sunshine. The sunniest places were Leuchars (71 hours), Dundee (71), St. Andrews (67), Arbroath (65) and Glenshagh, Kincardineshire (65).

Total precipitation was below average in practically the whole of the counties of Inverness, Argyll and Perth, and also in the Central Lowlands, totals in places being less than half the February normal. Elsewhere there was mainly a slight to moderate excess but at Wick and locally inland in the Counties of Moray, Banff and Aberdeen totals exceeded double the normal. A feature of the month were the heavy snowfalls around the 7th-9th and 23rd-24th. After the former storm which blocked most main roads and isolated rural areas, thawing snow led to flooding of fields and roads in Border and Northern districts. A partial thaw following the second storm prevented widespread dislocation. At Glenlivet snow depths, undrifted, were 16 inches on the 10th and 12 inches on the 26th. In addition to the snow periods, rain or sleet fell on many other days and falls of over an inch in 24 hours were numerous. On the 4th, 1.91 inches fell at a station in Glen Etive and 1.72 at Brenchoillie Farm, in Argyll.

Winds rose to gale force at exposed stations on 16 days. Fog was fairly frequent but only local thunder was reported.

Meteorological Notes—*continued***MARCH, 1958**

A very cold month with heavy snowfall and "record" low temperatures but mild at the beginning and end. Totals of precipitation and sunshine were variable.

The weather in March was similar to that in January and February and mean temperature (37.1°) for the country as a whole was 4.6° below average. It was the coldest March in Scotland since 1947. Day temperatures were up to the seasonal level in the first few days and in the last week. On the 4th the thermometer rose to 59° at Elgin and to 58° at Forres and Gordon Castle. Very cold Northerly winds set in on the 5th with snow in most districts and temperatures became progressively lower. A depression crossed the country on the 12th/13th and, with a rapid build up of pressure behind it over the North Sea, cold southeast winds became established and these lasted for almost two weeks. Day maxima failed to rise above freezing point in many places around the 9th and unusually severe night frosts occurred from the 10th-14th. Low air minima were -9° (41 degrees of frost) at Logie Coldstone on the 14th, -8° at Grantown-on-Spey on the 12th and -7° at Braemar on the 12th. These are the lowest air minima recorded in any March since systematic recording began about one hundred years ago. Ground frosts were frequent in most districts, the lowest minimum on the grass being -10° which occurred at Braemar on the 12th, at Balcladaich (Cannich area) on the 14th and at Glenmore Lodge on the 14th.

Heavy snow falls were reported during the second week, especially in some northern counties where a blizzard on the 8th completely paralysed traffic. At Braemar snow lay continuously from the 6th to the end of the month and at a number of high level stations the depth of snow, undrifted, was between one and two feet. In eastern districts, where onshore winds brought frequent showers, total precipitation for the month was twice to thrice the average in places. Central, north and northwest districts had about three-quarters of average but a large area in the west stretching from the Solway Firth to beyond the Caledonian Canal received only one-third to one-half the average. In contrast to the largest March total since 1866 at Montrose (Sunnyside), Greenock and Helensburgh had their least of any March this century. In the dry areas, precipitation fell on only 10-15 days (but less at some stations) and on roughly 15-20 days in the wetter parts of East Scotland. Daily falls of an inch or more occurred locally in the first few days and rather widely on the 28th and 29th. On the 28th, 2.45 inches fell at Den of Ogil (Angus), 2.19 in Dundee and 2.15 at Bridge of Dye (Kincardineshire).

The long spell of easterly winds brought a good deal of cloudiness to East Scotland where most sunshine records were below average. In Western districts the month was mainly a sunny one, especially so in the Northwest. Some totals there were 30 hours above the seasonal average. The sunniest places were Benbecula (149 hours), Duntuilum, Skye (140), Stornoway (137), Troon (127) and Prestwick Airport (127).

There were no reports of thunder, but fog was prevalent in the first and last weeks. Winds rose to gale force on 19 days.

TABLE 1.—BIRTHS, STILLBIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES OF CITIES, LARGE BURGHS AND COUNTIES OF SCOTLAND,

Quarterly Report

of the

Births, Deaths and Marriages registered in Scotland for the Quarter ended 30th June, 1958

REPORT

Summary.—In this quarter there were 25,588 births or 19·9 per 1,000 of the population. This rate is 0·4 higher than for the second quarter of 1957 and 0·9 above the average.

The marriage-rate was 6·5 per 1,000 of the population, 0·6 less than in the second quarter of 1957 and 0·4 less than the average for 1953-7.

There were 15,186 deaths in the quarter or 11·8 per 1,000 of the population, and this compares with 11·2 in the second quarter of 1957. The average over the five years 1953-1957 was 11·4.

There were 677 deaths in the quarter due to causes other than natural causes. 290 of these deaths were due to accidents in the home. Falls, involving the deaths of 27 men and 85 women mostly over 75 years of age, were the principal cause of these fatal accidents. 68 deaths were due to gas poisoning and these too were mostly of elderly people. 50 deaths were caused by suffocation of which 39 were of children under one. Burning and scalding accidents, involving 21 persons, were the other main cause of accidental deaths in the home.

Transport accidents caused 137 deaths in the quarter. 124 were road transport accidents, involving the deaths of 48 pedestrians, 32 motor cyclists, and 10 pedal cyclists.

Deaths from tuberculosis were 134, or 10 per 100,000 of the population. The rate is 2 per 100,000 lower than in the second quarter of 1957 and 8 per 100,000 below the 1953-57 average.

There were 15 maternal deaths or 6 for every 10,000 live births. This was 3 per 10,000 more than in the second quarter of 1957 and 1 per 10,000 above the 1953-57 average.

Live Births.—The 25,588 births in the quarter under review are 614 more than in the corresponding quarter of 1957. The rate per 1,000 population is 19·9 being 0·4 above the rate for the second quarter of 1957 and 0·9 above the average. The birth-rate in the cities is 20·2 and in the large burghs 21·4. These compare with 19·1 for the rest of Scotland.

In individual areas the rate ranged in the cities and large burghs from 29·0 in Coatbridge, 25·1 in Clydebank and 24·7 in Dumbarton to 18·0 in Perth, 17·6 in Edinburgh and 17·0 in Arbroath. In counties, exclusive of cities and large burghs, it ranged from 24·8 in Caithness, 22·1 in Kirkcudbright and Wigtown and 21·7 in Lanark to 14·1 in Nairn, 12·3 in Kinross and 8·5, in Bute.

EXPLANATORY NOTES

Correction for Residence.—Births, Stillbirths and Deaths are corrected throughout this Return by transfer where necessary to usual place of residence, if in Scotland, but Marriage figures are as registered.

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population in Scotland or of the local area concerned, as the case may be, as at 31st December, 1957.

Average Rates.—Unless otherwise indicated, any reference in this Report to the average rate or the average refers to the average of the rates in the corresponding quarters of the previous five years.

The proportion of illegitimate births, 4·3 per cent., is 0·1 above that for the second quarter of 1957 but 0·2 below the average rate.

Of the 25,588 births registered, 13,234 were of male children and 12,354 of female children, being 1,071 male births per 1,000 females. Births registered in April numbered 8,783 in May 9,037, and in June 7,768, the equivalent birth rates being 20·7, 20·6 and 18·3 respectively.

Stillbirths.—The number of stillbirths registered during the quarter was 568 and is equivalent to a rate of 22 per 1,000 total births (including stillbirths) which compares with 24 per 1,000 in the second quarter of 1957.

Marriages.—The number of marriages registered in the quarter was 8,381, 710 fewer than in the second quarter of 1957. The rate per 1,000 population is 6·5. This is 0·6 below the rate for the second quarter of 1957 and 0·4 below the average rate.

In considering the figures given in Table 1 it should be remembered that many marriages of persons, one or both of whom are resident in rural areas, are contracted in neighbouring cities or towns. Thus an area to area comparison is unreliable. While it is true also that births and deaths often occur in hospitals away from the place of residence the figures, unlike those for marriages, are so adjusted as to relate to the place of residence (a similar adjustment is not possible for marriages as two residences are involved).

6,850 of the 8,381 marriages registered in this quarter were solemnised by a minister of religion. 1,531 were civil marriages contracted in registrars' offices.

Of the 9,091 marriages in the second quarter of last year there were 7,475 marriages with a religious ceremony, 1,615 civil marriages and one irregular marriage.

Of the marriages registered in this quarter 3,604 were registered in April, 1,176 in May and 3,601 in June, the equivalent marriage rates being 8·5, 2·7, and 8·5 respectively.

Deaths.—15,186 deaths were registered in the quarter giving a death-rate of 11·8 per 1,000 of the population. They were 759 higher than in the second quarter of 1957 and the rate is 0·6 per 1,000 of the population higher than in that quarter and 0·4 above the average rate.

The rate in the four cities was 12·1 and in the large burghs 11·2. These rates compare with 11·7 in the rest of Scotland. The rate in individual cities and large burghs ranged from 13·8 in Ayr, 13·6 in Dumfries and 12·9 in Perth to 9·5 in Inverness, 9·1 in Dumbarton and 8·9 in Port Glasgow. In counties exclusive of cities and large burghs it ranged from 17·5 in Orkney, 17·3 in Argyll and 15·2 in Roxburgh to 10·5 in Kirkcudbright and Stirling, 9·7 in Moray and 9·3 in Midlothian and West Lothian.

Deaths registered in April numbered 5,633, in May 4,988 and in June 4,565, the equivalent death-rates being 13·3, 11·4 and 10·8 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 692 and are equivalent to an infant mortality rate of 27 per 1,000 registered live births. This rate is the same as that for the corresponding quarter of 1957 and one below the average. The mortality was 27 per 1,000 births for legitimate children and 37 for illegitimate children.

The infant mortality in the cities is 30, in the large burghs 28 and in the rest of Scotland 24. In the cities and large burghs individually it ranged from 49 in Dumbarton, 46 in Port Glasgow and 41 in Clydebank to 14 in Dumfries, 13 in Inverness and 12 in Kilmarnock.

In counties exclusive of cities and large burghs it ranged from 48 in Dumfries, 46 in Banff and 35 in Kincardine to 14 in Sutherland, 12 in Kirkcudbright, Moray and Roxburgh and 7 in Angus. There were no infant deaths in 5 counties.

The neo-natal rate (deaths of infants under 28 days) is 19 per 1,000 live births and is one below that for the corresponding quarter of 1957.

Causes of Death.—Principal Epidemic Diseases.—There were 43 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 19 more than in the second quarter of 1957. The death-rate for this group is 3 per 100,000 of population, and the average rate is 4. These deaths include 6 from meningococcal infections, 1 from measles and 36 from influenza. There were no deaths from typhoid fever, scarlet fever, diphtheria and whooping cough. 16 of the cities and large burghs had no deaths from the principal epidemic diseases and in the rest of Scotland 20 counties had none.

One death from acute poliomyelitis was registered. There was one death from this cause in the previous quarter and one in the corresponding quarter of 1957.

Tuberculosis.—There were 134 deaths from tuberculosis, 19 fewer than in the second quarter of 1957. 118 were from tuberculosis of the respiratory system and 16 from other forms. The death-rate from all forms is 10 per 100,000. From respiratory tuberculosis it is 9. Both rates are 2 below those for the corresponding quarter of 1957, and 8 and 7 respectively below the average.

Malignant Disease.—Deaths under this head were 2,714, 29 fewer than in the second quarter of 1957. The rate was 211 per 100,000 being 3 below the second quarter of 1957 but 8 above the average.

Respiratory Diseases.—Deaths from bronchitis numbered 443 and from pneumonia (excluding pneumonia of the newborn) 472. The corresponding death-rates per 100,000 population are 34 and 37. The average rate is 30 in each case.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 15 (a rate of 0.6 per 1,000 live births). This rate is 0.3 above that for the corresponding quarter of 1957 and 0.1 above the average. Including stillbirths the maternal death-rate is 0.6 per 1,000.

Violence.—Deaths from violence (i.e. from other than natural causes) numbered 677, and are equivalent to a death-rate of 53 per 100,000 of the population. In the second quarter of 1957 the number was 640 and the rate 50 per 100,000 of the population.

290 of the deaths in the second quarter were from accidents in the home. The numbers are subdivided by causes, broadly grouped, and by sex and age, in the following table.

Deaths from Accidents in the Home by sex and age—quarter ended

CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at National Insurance Offices of the Ministry of Pensions and National Insurance in Scotland during the 13 weeks ended 1st July, 1958, was 201,674. The number of such claims made at the 17 principal towns is shown below.

Town	New Sickness Benefit Claims in the 13 weeks ended 1st July, 1958	Town	New Sickness Benefit Claims in the 13 weeks ended 1st July, 1958
1. Glasgow	57,150	10. Dunfermline	3,016
2. Edinburgh	15,395	11. Clydebank	4,305
3. Aberdeen	7,410	12. Ayr	3,475
4. Dundee	7,327	13. Kilmarnock	2,947
5. Paisley	5,446	14. Perth	1,824
6. Greenock	4,879	15. Hamilton	6,246
7. Motherwell and Wishaw	7,100	16. Falkirk	2,774
8. Kirkcaldy	3,245	17. Airdrie	2,441
9. Coatbridge	4,240		
			<hr/> 139,220

These figures represent the number of new claims made at Ministry of Pensions and National Insurance Offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES**Supplied by the Meteorological Office, Edinburgh****APRIL, 1958**

Cold with wintry showers in the first half of the month followed by mild unsettled weather in the second half.

The cold southeasterly winds which gave wintry showers in East Scotland and had been a feature of the weather since mid-March continued during the first week of April. An anticyclone brought a more settled spell between the 6th and 16th but temperatures remained mainly below the seasonal level. An unsettled mild southwesterly type followed, and this continued until almost the end of the month. Despite the general mildness in the second half, mean temperature (44.8°) for the month as a whole was slightly below average but in some districts mean values were slightly above average. The cold weather around the 2nd-4th and 10th-12th, when day maxima rose at some high level stations to only 35° - 40° , contrasted with readings around 65° on the 22nd and 29th-30th. Keen night frosts occurred in the first half of the month, amongst low air minima being 15°F (17 degrees of frost) at Kincaig on both the 2nd and 11th. On the grass, temperature fell to 5°F at Coalburn (Lanarkshire) on the 2nd and to 7°F at Dalwhinnie on the 3rd. In general the highest temperature occurred at stations round the Moray Firth Estuary and in Clyde and southwest districts, where the thermometer rose in places to 68° on the 30th. In striking contrast were maxima of only 53° at Baltasound (North Shetland) and 55 at Stornoway and Benbecula.

The first half of April had, in general, more sunshine than the second but whereas records at many stations in the South were above average, some in the North were well below the usual quota for the month of April. At Fort William, Gordon Castle (Fochabers) and Tiree aggregates were 20-40 hours short of average. The sunniest places were Forres (163 hours), Troon (163), Stranraer (162), Dunbar (161) and Arbroath (161).

Total precipitation over most of the country ranged from one half to three quarters of average. At Paisley it was the driest April for about 20 years. There was, however, a slight to moderate excess in coastal districts from Arbroath southwards to the Borders, and also in small areas around Upper Loch Linnhe and Loch Ness. Mainly light showers, often of snow and sleet, came in the first fortnight but falls were heavier in some Eastern districts on the 3rd and 4th. Snow fell to a depth of 1-4 inches in places, for instance at Balmoral and Penicuik it lay about 4 inches deep on the 4th and 5th. In the unsettled spell in the second half of the month precipitation, mostly rain, occurred frequently. Amongst the highest daily rainfalls for the month were 2.00 inches at Robertson (Hawick) and 1.51 at Balerno, both on the 4th.

Gales occurred at exposed places on 7 days, and local thunder and fog on 3 and 15 days respectively.

Meteorological Notes—continued**May, 1958**

A rather cold unsettled month with a fine mild opening. Rainfall was mainly above average but sunshine records were fairly good for the season.

In the opening days temperature rose above 70 degrees in many districts and to 75 at Bowhill (Selkirk) on the 1st. A number of stations had 74 on the same day. These moderately high readings for May contrasted with day maxima in the 45°-50° range in the colder weather from the 3rd-7th, 9th-14th and around the 23rd. Night frosts were fairly widespread in these periods and were quite low for the month of May. Amongst the lowest minima were 19°F. (13 degrees of frost) at Kincaig on the 3rd and 10th, 20°F. at Dalwhinnie on the 3rd and 22° at Sourhope Farm (Cheviots) and Glenlivet on the 7th and 11th respectively. Thermometers exposed on the ground registered 10°F. (22 degrees of frost) at Balcladaich (Cannich area) on the 3rd and 7th and 11°F. at Dalwhinnie (3rd and 10th) and at Kincaig (7th). For the country as a whole, mean temperature (49·1°) was 0·9° below average, North and South districts having the greatest departures viz. 2° to 3°.

Precipitation showed a slight to moderate excess over the greater part of the country but in some Northwest districts, totals were double the average. At Achnashellach it was the wettest May since 1922. Some coastal areas, especially in the South, had somewhat less than the usual rainfall for May. Only light scattered showers came in the first week and showers were more frequent and heavy from the 9th-15th and 25th-29th; otherwise rain was persistent and on some days thunder caused heavy rains. On the 19th, 2·29 inches fell at Spean Bridge; 2·29 in Glen Etive and 2·08 at Kinlochourn. Local snow and sleet showers fell in the Northern half of the country during the cold periods.

Except on the extreme North and South, sun records were good for May; a number of stations having aggregates over 200 hours. Whereas totals in some cases were 35·40 hours in excess of average, there were local deficiencies of 20-40 hours in the duller areas. Amongst the sunniest places were Benbecula (237 hours), St. Andrews (223), Elgin (223), Banff (219), Rattray Head (219), Duntuilin, Skye (218) and Gordon Castle, Fochabers (218).

There was a high frequency of fog, thunder and gales. The most widespread gale was that on the 19th/20th. Fog was prevalent on the North and East coasts on the 30th/31st.

Meteorological Notes—*continued***June, 1958**

An unsettled and rather cool month. Sunshine records were low in most places and though it was drier than usual in the North and West of the country in many Eastern, Central and Southern districts, rainfall was above the seasonal average.

The warmest days occurred at the beginning and end of the month and on the 14th and 15th. The highest temperatures were recorded in North and Northeast Scotland and included 78°F. at Findhorn on the 29th, 77°F. at Strathlyon and at Elgin on the 30th and 76° at Kinlochewe on the 6th. In Southern Scotland the highest temperature was 74° at Paisley and Auchincruive on the 29th. The lowest day maximum temperatures occurred on the 9th and 10th and also from the 18th to the 23rd and included readings of 44° at Glenshee Lodge and Balmoral on the 10th and 48° at Coalburn on the 20th. Low night minima were 28°F. (4 degrees of frost) at Strathlyon on the 1st/2nd, 25°F. at Halkirk on the 10th/11th and 28°F. at Dalwhinnie on the 20th/21st. Ground frost occurred locally on the 1st and 7th, 11th and 13th and from 16th to 23rd, the lowest minima recorded by thermometers exposed on the grass were 20° at Dalwhinnie on the 20th/21st and 20° at Balclutha (Cannich area) on the 21st/22nd.

There was much less rain than usual over North and West Scotland and also over much of the Northeast. In Orkney and Shetland and in West Inverness-shire, there was less than half the average rainfall for June. South-east of the mountain areas from Argyllshire to Aberdeenshire there was a moderate to large excess, particularly in Southeast and Central districts where rainfall was from one and one half to twice the average for June. The variation from average was greatest in the North and South, at Baltasound (Shetland) it was the driest June since records began in 1911, whereas Marchmont (Berwickshire) had its wettest one for 20 years. It was mainly dry over the country as a whole from about the 3rd to the 6th, and about the 13th/14th, and in the Northeast and East on the 29th/30th. On most other days rain was persistent especially during the periods 8th to 11th, 15th to 19th and 23rd to 28th. A number of heavy falls occurred often as a result of thunderstorms; the wettest days generally were the 25th to 27th. On the 26th there was 1.65 inches at Caberach Manse, Aberdeenshire, and 1.55 inches at Strathlyon.

Records of sunshine were below average in most places except locally in Northwest Scotland. At many places totals were 50 to 100 hours below average and several stations had less than 100 hours for the month. The sunniest place was Duntulm (Skye) with 181 hours followed by Stornoway, Benbecula and Rattray Head each with 177. Other records were Tiree (173), Wick (160), Grimsetter, Orkney (155), Elgin (155), Dunbar (150), North Berwick (144).

Fog occurred at one place or other on 26 days—a high frequency for June—and was particularly prevalent near the East coast. The number of gales and thunderstorms was about average.

TABLE 1.—BIRTHS, STILLBIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES OF CITIES, LARGE BURGHS AND COUNTIES OF SCOTLAND,
WITH THEIR EQUIVALENT RATES PER 1,000 OF POPULATION—QUARTER ENDED 30TH JUNE, 1958

Quarterly Report

of the

Births, Deaths and Marriages registered in Scotland for the Quarter ended 30th September, 1958

REPORT

Summary.—There were 23,535 births in the quarter or 18·1 per 1,000 of the population. This rate is 0·5 lower than for the third quarter of 1957 but 0·4 above the average for corresponding quarters of the five years 1953-1957.

The marriage-rate was 9·6 per 1,000 of the population, 0·4 less than in the third quarter of 1957 and 0·2 below the average for 1953-1957.

There were 12,664 deaths in the quarter or 9·7 per 1,000 of the population. This is the lowest quarterly death-rate ever recorded in Scotland. It compares with a rate of 10·4 in the third quarter of 1957. The average for the corresponding quarters over the five years 1953-1957 was 10·1.

There were 702 deaths in the quarter due to causes other than natural causes. 218 of these deaths were due to accidents in the home, as detailed in the table on page 5. 200 were due to transport accidents, of which 184 were road transport accidents.

Deaths from tuberculosis (all forms) were 124, or 10 per 100,000 of the population. The rate is 1 per 100,000 higher than in the third quarter of 1957 but 5 per 100,000 below the 1953-1957 average.

There were 16 maternal deaths or 7 for every 10,000 live births. This was 2 per 10,000 more than in the third quarter of 1957 but the same as the 1953-1957 average.

Live Births.—The 23,535 births in the quarter under review are 565 fewer than in the corresponding quarter of 1957. The rate per 1,000 population is 18·1, which is 0·5 below the rate for the third quarter of 1957 but 0·4 above the average. The birth-rate in the cities is 18·2 and in the large burghs 19·1. These rates compare with 17·6 for the rest of Scotland.

In individual areas the rate ranged in the cities and large burghs from 25·4 in Dumbarton, 22·0 in Coatbridge and 21·9 in Kilmarnock to 15·8 in Perth, 15·7 in Dunfermline and 14·4 in Arbroath. In counties, exclusive of cities and large burghs, it ranged from 22·3 in Sutherland, 21·5 in Wigtown and 20·7 in Clackmannan to 13·1 in Berwick, 12·7 in Zetland and 11·1 in Bute and Kinross.

The proportion of illegitimate births, 4·0 per cent, is 0·3 below that for the third quarter of 1957 and 0·6 below the average.

Of the 23,535 births registered, 12,154 were of male children and 11,381 of female children, being 1,068 male births per 1,000 females. Births registered in July numbered 7,821, in August 7,709, and in September 8,005, the equivalent birth-rates being 17·8, 17·6 and 18·9 respectively.

EXPLANATORY NOTES

Correction for Residence.—Births, Stillbirths and Deaths are corrected throughout this Return by transfer where necessary to usual place of residence, if in Scotland, but Marriage figures are as registered.

Birth, Death and Marriage Rates.—These rates are calculated on the estimated population in Scotland or of the local area concerned, as the case may be, as at 31st December, 1957.

Average Rates.—Unless otherwise indicated, any reference in this Report to the average rate or the average refers to the average of the rates in the corresponding quarters of the previous five years.

Stillbirths.—The number of stillbirths registered during the quarter was 530 and is equivalent to a rate of 22 per 1,000 total births (including stillbirths) which compares with 23 per 1,000 in the third quarter of 1957.

Marriages.—The number of marriages registered in the quarter was 12,454, 522 fewer than in the third quarter of 1957. The rate per 1,000 population is 9·6. This is 0·4 below the rate for the corresponding quarter of 1957 and 0·2 below the average rate.

In considering the figures given in Table 1 it should be remembered that many marriages of persons, one or both of whom are resident in rural areas, are contracted in neighbouring cities or towns. Thus an area to area comparison is unreliable. While it is true also that births and deaths often occur in hospitals away from the place of residence, the figures, unlike those for marriages, are so adjusted as to relate to the place of residence (a similar adjustment is not possible for marriages as two residences are involved.)

Of the 12,454 marriages registered in this quarter, 10,356 were solemnised by a minister of religion. 2,097 were civil marriages contracted in registrars' offices, and 1 was an irregular marriage registered on the authority of a decree of court.

12,976 marriages were registered in the third quarter of last year, and of these, 10,945 were marriages with a religious ceremony, 2,029 civil marriages and 2 irregular marriages.

Of the marriages in this quarter 4,390 were registered in July, 3,499 in August and 4,565 in September, the equivalent marriage rates being 10·0, 8·0 and 10·8 respectively.

Deaths.—12,664 deaths were registered in the quarter giving a death-rate of 9·7 per 1,000 of the population. They were fewer than in the third quarter of 1957, and the rate is 0·7 per 1,000 of the population lower than in that quarter and 0·4 below the average rate.

The rate in the four cities was 9·9 and in the large burghs 9·2. These rates compare with 9·8 in the rest of Scotland. The rate in individual cities and large burghs ranged from 11·2 in Kilmarnock and Perth, 10·6 in Edinburgh and 10·4 in Hamilton, to 7·1 in Dumfries, 6·9 in Clydebank and 6·6 in Port Glasgow. In counties exclusive of cities and large burghs it ranged from 18·3 in Bute, 14·8 in Peebles and 14·2 in Sutherland, to 8·1 in West Lothian, 7·6 in Banff and 6·1 in Kinross.

Deaths registered in July numbered 4,369, in August 4,099 and in September, 4,196, the equivalent death-rates being 10·0, 9·4 and 9·9 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 578 and are equivalent to an infant mortality rate of 25 per 1,000 registered live births. This rate is 2 less than that for the corresponding quarter of 1957 and one below the average. The mortality was 24 per 1,000 births for legitimate children and 36 for illegitimate children.

The infant mortality in the cities was 26, in the large burghs 28 and in the rest of Scotland 22. In the cities and large burghs individually it ranged from 63 in Hamilton, 62 in Airdrie and Perth and 35 in Paisley, to 15 in Ayr, 12 in Kirkcaldy and 8 in Rutherglen. There were no infant deaths in Arbroath Inverness or Stirling.

In counties exclusive of cities and large burghs it ranged from 70 in Kirkcudbright, 41 in Sutherland and 37 in Inverness, to 14 in Argyll, East Lothian

and Perth, 13 in Aberdeen, Midlothian and Roxburgh and 12 in Dumfries and Ross and Cromarty. There were no deaths in the Counties of Berwick, Kincardine and Kinross.

The neo-natal rate (deaths of infants under 28 days) is 18 per 1,000 live births and is 2 below that for the corresponding quarter of 1957.

Causes of Death.—*Principal Epidemic Diseases.*—There were 13 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 91 fewer than in the third quarter of 1957, during which there was an epidemic of influenza. The death-rate for this group of diseases was 1 per 100,000 of population, compared with an average rate of 3. The deaths include 1 from typhoid fever, 1 from whooping cough, 4 from meningococcal infections, 1 from measles and 6 from influenza. There were no deaths from scarlet fever or diphtheria. 19 of the 24 cities and large burghs had no deaths from the principal epidemic diseases, and in the rest of Scotland 27 of the 33 counties had none.

Five deaths from acute poliomyelitis were registered in this quarter, compared with 1 in the previous quarter and 7 in the corresponding quarter of 1957.

Tuberculosis.—There were 124 deaths from tuberculosis, 2 more than in the third quarter of 1957. 113 were from tuberculosis of the respiratory system and 11 from other forms. The death-rate from all forms was 10 per 100,000, and that from respiratory tuberculosis was 9. The rate from all forms is 1 above that for the corresponding quarter of 1957, and 5 below the average. The rate from respiratory tuberculosis is the same as that for the third quarter of 1957 but 4 below the average.

Malignant Disease.—Deaths under this head were 2,615, 91 fewer than in the third quarter of 1957. The rate was 201 per 100,000, being 8 below the third quarter of 1957 and 3 below the average.

Respiratory Diseases.—Deaths from bronchitis numbered 227 and from pneumonia (excluding pneumonia of the newborn) 268. The corresponding death-rates per 100,000 population are 17 and 21, and the average rates are 18 and 23 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 16 (a rate of 0·7 per 1,000 live births). This rate is 0·2 above that for the corresponding quarter of 1957 but is the same as the five years' average. Including stillbirths, the maternal death-rate is 0·7 per 1,000.

Violence.—Deaths from violence (i.e., from other than natural causes) numbered 702, and are equivalent to a death-rate of 54 per 100,000 of the population. In the third quarter of 1957 the number was 713 and the rate 55 per 100,000 of the population.

218 of the deaths in the third quarter were from accidents in the home. The numbers are subdivided by causes, broadly grouped, and by sex and age, in the following table.

CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to Sickness Benefit under the National Insurance Acts made at National Insurance Offices of the Ministry of Pensions and National Insurance in Scotland during the 13 weeks ended 30th September, 1958, was 167,151. The number of such claims made at the 17 principal towns is shown below.

Town	New Sickness Benefit Claims in the 13 weeks ended 30th September, 1958	Town	New Sickness Benefit Claims in the 13 weeks ended 30th September, 1958
1. Glasgow	47,488	10. Dunfermline	2,523
2. Edinburgh	12,816	11. Clydebank	3,632
3. Aberdeen	6,126	12. Ayr	2,668
4. Dundee	6,514	13. Kilmarnock	2,370
5. Paisley	4,406	14. Perth	1,630
6. Greenock	4,446	15. Hamilton	5,213
7. Motherwell and Wishaw	5,971	16. Falkirk	2,272
8. Kirkcaldy	2,606	17. Airdrie	2,266
9. Coatbridge	3,674		
			116,621

These figures represent the number of new claims made at Ministry of Pensions and National Insurance Offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

JULY, 1958

Apart from a few days of fine, warm weather near the beginning of the month, weather was generally unsettled and from the 13th onwards rather cool.

Sunshine records were generally above average except locally in the East where in one or two places it was up to 20 hours deficient. In a number of places it was the sunniest July since 1955 and in Benbecula was the sunniest since 1951. The excess occurred mainly between the 2nd and the 8th when daily values of 15 to 16 hours' sunshine were recorded.

Mean temperatures were mainly slightly below average, but were above average in one or two places, mainly districts around Glasgow. From the 2nd to the 8th day temperatures were often between 75°F. and 85°F., the highest being 85°F. at Paisley on the 4th and 5th and 84°F. at Kinlochewe on the 4th. The coolest days occurred around the 13th and in the last week when day maxima in a number of places were in the lower 50's. The lowest minimum temperatures occurred mainly around the 23rd to 25th with 29°F. at Dalwhinnie, Kinraig, Grantown-on-Spey and Glenlivet on the 25th. Ground frost was fairly widespread on the 25th and also occurred in places on one or two other days. On the 25th thermometers exposed on the grass recorded 20°F at Dalwhinnie.

Rainfall was below average west of a line from Nairn to Kintyre and above average to the east. Double the average was recorded in parts of the Moray Firth area, and of the Midlothian and Borders areas, but over the Western Isles and the North West seaboard there was less than half the average. In the first 10 days there were mainly scattered light showers only. During the remainder of the month, apart from occasional dry days, there was persistent heavy rain, especially on the 25th, when many places had more than half the July total. On the 28th there was more than two inches in many places, 3.13 inches at Cabrach Manse, 3.12 at Drummuir Castle, 3.08 at Keith, 3.01 at Muirfold Grange and 2.95 at Dufftown. At Drummuir Castle and at Keith rainfall on the 20th, 22nd and 28th totalled about 5½ inches. Edinburgh had its wettest July with one exception (1940) since 1836 and Arbroath the wettest July with one exception (1940) since 1888.

Fog occurred at one place or other on 16 days, which is above average for July. It was most frequent in places near the East coast and on extreme South West coasts.

The number of thunderstorms and gales was about average.

Meteorological Notes—*continued***AUGUST, 1958**

Very unsettled weather continued throughout the month and over the greater part of the country sunshine records were rather low and rainfall was above average.

There was a marked deficiency of sunshine in most places. At Helensburgh it was the duller August for 10 years. In a few places, e.g., Tiree and Marchmont (Berwickshire) there was a slight excess. The sunniest places were Tiree (174 hours), Sourhope, Cheviot Hills (166), Dunbar (157), Marchmont (148), North Berwick (147).

Mean temperatures for the month were near to average for the country as a whole. The warmest days were on the 10th and 12th and from the 27th to the 31st. The highest temperatures recorded were 77°F. at Findhorn and Kelso, 76 at Ruthwell and Penicuik and 74 at Kinlochewe, Forres, Selkirk and Haddington. All of these occurred on the 10th when there was a Southerly airstream over the country. The coolest days occurred mainly between the 1st and 9th, and between the 19th and 26th when many day maxima were below 60°F. The lowest night temperatures were 32°F. (Fyvie Castle) and 34 (Glenlivet) on the 9th. There was a slight ground frost locally in the Highlands on one or two nights. At Balcladaich (Cannich) on the 26th the temperature recorded by a thermometer exposed on the grass was 22°F.

Over the greater part of the country, there was measurable rain (more than .005 inch) on between 18 and 27 days. There were some dry days between the 5th and 8th (except in the North) and in the last week; otherwise rain was rather persistent and often heavy. There were many heavy falls of over one inch in 24 hours recorded, often associated with thunderstorms. Among the heaviest were 2.75 inches at Connel, Argyll, on the 20th, 2.50 inches at Kype reservoir in Lanarkshire on the 22nd, and 2.81 inches at Craigcleuch, Dumfriesshire, on the 22nd. Parts of Lanarkshire, Perthshire and Kincardineshire had more than $1\frac{1}{2}$ times the August average, and Glasgow (Springburn) had the wettest August for 10 years. Rainfall was below average, however, in some areas in South Scotland and the Borders and locally near the East coast, and also for the third successive month over the North West sea board and some outer islands of Argyll. At Achnashellach (Ross-shire) it was the driest August with one exception (1955) for 10 years.

Thunderstorms were reported at one place or other on 16 days, a high frequency for August, and fog on 16 days, also above the August average. Fog was most widespread around the 20th to 23rd.

The number of gales (5th, 6th, 29th) was slightly below average.

Meteorological Notes—*continued***SEPTEMBER, 1958**

It was a mild September with settled spells at the beginning of the month and again during the second week.

Sunshine was near to average in most places. Locally in the East and in the extreme North there was a slight deficit, but in the West it tended to be mainly above the average. The sunniest places were Dunbar, 162 hours, and Sourhope (Cheviot Hills) 159 hours.

Mean temperatures were generally 3°F. to 4°F. above the September average with mean day maxima being generally between 60°F. and 65°F. and mean night minima between 45°F. and 50°F.

The warmest days were in the first half of the month up to the 16th when many stations had maxima of 70°F. or over on one or more days. Among the highest temperatures recorded were 78°F. at Largs and 76°F. at Fort William, Ruthwell and Palnure all on the 2nd. The coolest days (day maxima 56°F to 60°F.) occurred during the last week. Among the lowest night minima were 27°F. at Grantown-on-Spey and 29°F. at Kincaig on the 27th and 31°F. at Glenlivet and Glenshee on the 23rd.

Ground frosts were fairly frequent being most widespread on the 22nd, 23rd, 26th and 27th. A temperature of 22°F. recorded by a thermometer exposed on the ground at Garve on the 27th was among the lowest.

Although rainfall was below average over the greater part of the country, South West of a line from Kelso to Glasgow and over a large area of Central Scotland between Stirling and Inverness there was a moderate excess. North of a line from Dornoch to Loch Maree and including Orkney there was less than half the average rainfall for September.

At Ruthwell, Dumfriesshire, it was the wettest September since records began in 1911 with the exception of 1950, at Achnashellach it was the driest since 1941. Apart from the 5th to the 8th and round about the 13th it was mainly dry until the 17th. From the 18th onward rain was rather persistent though from the 25th to 27th it was dry in most places. There were many heavy falls of over one inch in 24 hours and serious flooding occurred in some places especially on the 6th. Among the heaviest recorded falls were 2.30 inches (Kilmarnock) and 2.19 inches (Kaim Dam) on the 6th and 2.26 inches at Strathyre on the 28th.

Thunderstorms were reported at one place or other on 12 days, a high frequency for September. The number of gales was slightly below average.

Fog was reported at one place or other on 17 days, a high frequency for September. It was most widespread on the 2nd, 6th and 11th.

Annual Subscription 10s. 6d. including postage

NOTE.—In addition to the usual quarterly return of births, deaths and marriages, which begins on page 10, this Report provides on pages 2 to 9 a short preliminary return of the main population and vital statistics for the year 1958. The full statistics will, in due course, be given in the Registrar General's Annual Report. The figures now given are provisional but may be taken as fairly accurate.

Preliminary Return for the year 1958

The main population and vital statistics for the year 1958 are given in Tables IA and IIA on pages 4 to 9 of this Report. The main features of the tables are briefly indicated below.

Population.—The population resident in Scotland at 30th June, 1958, is estimated to have been 5,169,000.

The natural increase of the population in 1958 (excess of births over deaths) was 37,000. The net estimated migration to other countries was 16,800, 18,700 less than in 1957. 8,600 of the loss was to other parts of the United Kingdom and the remainder to countries overseas, mainly Australia, Canada, New Zealand and the United States of America.

Births.—99,480 live births were registered in 1958, a rate* of 19·2 per thousand. This was 0·2 above 1957 and 1·0 above the average†. 1,053 boys were born for every 1,000 girls.

Stillbirths numbered 2,324 as compared with 2,378 in 1957, representing a rate of 23 stillbirths per 1,000 of all births (live and still). This is the lowest stillbirth-rate yet recorded in Scotland.

Marriages.—Marriages registered during the year numbered 41,186. This represents a rate of 8·0 and is 0·3 below that for 1957, and also 0·3 below the average. The pre-war (1934-1938) average rate was 7·6. 33,673 of the marriages were solemnised by ministers of religion, 33,553 having been preceded by proclamation of banns or by publication of notice and 120 authorised by Sheriff's licence in accordance with the provisions of the Marriage (Scotland) Act, 1939. 7,510 marriages were contracted in the offices of Authorised Registrars and 3 were registered on the authority of the Court of Session. Civil marriages comprise 18·2 per cent. of the total marriages.

Deaths.—Deaths from all causes numbered 62,065 and equalled a death-rate of 12·0 per thousand. This rate is 0·1 above that for 1957 and also 0·1 above the average. The average rate in the five years before the war (1934-1938) was 13·2.

Deaths of children under one year numbered 2,758, giving an infant mortality rate of 28 per thousand living births, 1 below that for 1957, and the lowest rate yet recorded in Scotland. It is about one-third of the average of 77 in the five years before the war. The neo-natal rate (deaths of infants under 28 days) was 19 per thousand living births, which is also the lowest recorded in this age-group. Legitimate children had an infant mortality rate of 27, and illegitimate children of 36.

Table IIA shows the total number of deaths registered in Scotland during the year, classified by sex and cause, and also the number by age and cause.

EXPLANATORY NOTES

In this Preliminary Return—

* birth, death and marriage rates are calculated on the estimated population of Scotland as at 30th June, 1958;

† references to an average or average rate are to the average annual rate over the five years 1953-1957.

A comparison of deaths by age-groups in 1958 and 1957 shows decreases in seven of the nine age-groups under 65. The greatest decreases were in age-groups 5-9 and 10-14. There were increases of 2, 4 and 3 per cent. respectively in age-groups 65-74, 75-84 and 85 and over.

The death-rate at ages under 45 was 2.0 per thousand, and at ages 45 and over 31.2. In 1957 the corresponding rates were 2.0 and 30.8.

Causes of Death.—The number of deaths from the principal epidemic diseases† was 177, 563 less than in 1957. The death-rate was 3 per 100,000. As in 1957, no deaths were recorded from diphtheria. There were no deaths from scarlet fever (including streptococcal sore throat) against 2 in 1957. Typhoid fever caused 1 death (none in 1957). There were 25 deaths from meningococcal infections (4 in 1957), 4 from whooping cough (21), 4 from measles (16) and 143 from influenza (680—it will be recalled that there was an epidemic of influenza in the autumn of 1957). There were 16 deaths from acute poliomyelitis, 5 more than in 1957.

Deaths from tuberculosis (all forms) numbered 687, 36 fewer than in 1957. The death-rate was 13 per 100,000, 6 below the average. 638 of the deaths were from respiratory tuberculosis, 26 fewer than in the previous year, and the rate of 12 per 100,000 was 5 below the average. Deaths from non-respiratory tuberculosis at 49 were 10 fewer than in 1957 and the rate of 1 per 100,000 was 1 below the average.

Deaths from cancer numbered 10,831 and were 84 more than in 1957 and 288 above the average number of 10,543 for the years 1953-1957. Deaths from cancer of the respiratory system accounted for 2,373 compared with 2,220 in 1957 and the average number of 2,038 for the years 1953-1957.

Deaths from heart disease numbered 21,348 and were 783 more than in 1957. They account for 34 per cent. of all deaths.

From vascular lesions affecting the central nervous system deaths numbered 9,982 against 9,566 in 1957, from nephritis and nephrosis 417 against 511, and from senility 558 against 580.

Deaths from diseases of the respiratory system (not tubercular, malignant or influenzal) numbered 5,011 which were 417 more than in 1957. They included 2,106 from pneumonia (except of newborn) and 2,294 from bronchitis, the rates per 100,000 being 41 and 44 respectively. Compared with 1957 the number from pneumonia was 64 more and from bronchitis 281 more.

Deaths from diseases and accidents of pregnancy and childbirth numbered 52 as against 46 in 1957. This represents a maternal mortality rate of 0.5 per thousand births (live and still). This rate is the same as that for 1957 and is 0.1 below the average.

Deaths from congenital malformations and diseases of early infancy numbered 2,159 and were 87 less than in 1957.

Deaths attributed to violence (i.e., deaths not due to natural causes) numbered 2,848 and are 47 more than in 1957. Of these 435 were ascribed to suicide, 629 to road transport accidents, 1,109 to accidents in the home and 675 to other forms of violence; the numbers from these causes in 1957 were 420, 585, 1,060 and 736 respectively.

In Table IA will be found the main figures and rates for Scotland, cities, large burghs and remainder of counties, with individual figures for each area.

† See note on page 6

TABLE 1A.—MAIN STATISTICS FOR 1958

* Including typhoid fever, scarlet fever and strepto coccal sore throat, diphtheria and acute infectious encephalitis.

Quarterly Return of the Births, Deaths and Marriages registered in Scotland for the Quarter ended 31st December, 1958

REPORT

Summary.—There were 25,257 births in the quarter or 19·3 per thousand of the population. This rate* is 0·7 higher than for the fourth quarter of 1957 and 1·7 above the average†.

The marriage-rate was 7·2 per thousand of the population, the same as that in the fourth quarter of 1957 and 0·2 above the average.

There were 15,587 deaths in the quarter or 11·9 per thousand of the population. This compares with a rate of 13·1 in the fourth quarter of 1957, and an average of 11·9.

There were 709 deaths in the quarter due to causes other than natural causes. 276 of these deaths were due to accidents in the home, as detailed in the table on page 13. 204 were due to transport accidents, of which 173 were road transport accidents.

Deaths from tuberculosis (all forms) were 194, or 15 per 100,000 of the population. The rate is 2 per 100,000 lower than in the fourth quarter of 1957 and 4 per 100,000 below the average.

There were 8 maternal deaths or 3 for every 10,000 live births. This was 4 per 10,000 less than in the fourth quarter of 1957 and 3 below the average.

Live Births.—The 25,257 births in the quarter under review are 1,113 more than in the corresponding quarter of 1957. The rate per thousand population is 19·3, being 0·7 higher than the rate for the corresponding quarter of 1957 and 1·7 above the average. The birth-rate in the cities is 19·8 and in the large burghs 20·9. These compare with 18·4 for the rest of Scotland. In individual areas the rate ranged in the cities and large burghs from 26·7 in Coatbridge, 24·4 in Kilmarnock and 23·4 in Clydebank to 16·9 in Edinburgh and Rutherglen, 16·0 in Dumfries and 15·8 in Falkirk. In counties exclusive of cities and large burghs it ranged from 21·2 in Caithness, 21·1 in Clackmannan, and 20·8 in West Lothian to 12·8 in Zetland, 11·5 in Peebles and 8·8 in Berwick.

The proportion of illegitimate births, 4·0 per cent, is the same as that for the fourth quarter of 1957 and 0·2 below the average.

Of the 25,257 births registered, 12,787 were of male children and 12,470 of female children, being 1,025 male births per thousand females. Births registered in October numbered 8,940, in November 7,761, and in December 8,556, the equivalent birth-rates being 20·3, 18·2 and 19·4 respectively.

Stillbirths.—The number of stillbirths registered during the quarter was 612 and is equivalent to a rate of 24 per thousand total births (including stillbirths) which compares with 23 per thousand in the fourth quarter of 1957.

Marriages.—The number of marriages registered, 9,462, is 138 more than for the fourth quarter of 1957. The rate per 1,000 population was 7·2. It is

EXPLANATORY NOTES

In the Quarterly Return—

* birth, death and marriage rates are calculated on the estimated population at 31st December, 1958;

† references to an average or average rate are to the average annual rate for the corresponding quarters of the five years 1953-1957; and
births, stillbirths and deaths are, where necessary, corrected by transfer to usual place of residence, if in Scotland

the same as that for the corresponding quarter of 1957, but 0·2 above the average. The rate in the cities is 8·3 and in the large burghs 8·3. These compare with 6·0 for the rest of Scotland. In individual areas the rate in the cities and large burghs ranged from 15·9 in Inverness, 11·4 in Dumfries and 11·0 in Rutherglen to 6·5 in Coatbridge, 6·2 in Dumbarton and 5·7 in Stirling. In counties exclusive of cities and large burghs it ranged from 9·4 in Sutherland, 9·3 in Bute and 9·2 in Dumfries, to 3·9 in Zetland, 3·7 in Ross and Cromarty and 3·2 in Berwick.

Of the 9,462 marriages registered, 1,854 were civil marriages contracted in registrars' offices, and one was an irregular marriage registered on the authority of the Court of Session. The remainder, 7,607, were solemnised by a minister of religion. In the corresponding quarter of 1957 civil marriages numbered 1,836, those with a religious ceremony numbered 7,486 and there were also two irregular marriages.

Marriages registered in October numbered 3,709, in November 2,230 and in December, 3,523, the equivalent marriage-rates being 8·4, 5·2 and 8·0 respectively.

Deaths.—Deaths registered during the quarter numbered 15,587, and equalled a death-rate of 11·9 per thousand population. They are 1,418 fewer than were registered in the corresponding quarter of 1957. The rate is 1·2 lower than in that quarter, but is the same as the average. The death-rate in the cities is 12·6 and in the large burghs 11·0. These compare with 11·8 in the rest of Scotland. The rate in individual cities and large burghs ranged from 13·7 in Ayr, 13·4 in Falkirk and 13·3 in Dumfries to 9·9 in Dunfermline and Port Glasgow, 9·5 in Coatbridge and 9·0 in Kirkcaldy. In counties exclusive of cities and large burghs it ranged from 17·7 in Kinross, 17·5 in Argyll and 16·3 in Nairn to 10·7 in Midlothian, 10·2 in Clackmannan and 9·9 in West Lothian.

Deaths registered in October numbered 4,621, in November 4,661 and in December 6,305, the equivalent death-rates being 10·5, 10·9 and 14·3 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 694 and are equivalent to an infant mortality rate of 27 per thousand registered live births. This rate is 2 lower than that for the corresponding quarter of 1957 and 4 below the average. Among legitimate children the mortality was 27 per thousand births and among illegitimate children 33.

The infant mortality in the cities is 31, in the large burghs 28 and in the rest of Scotland 24. In the cities and large burghs individually it ranged from 62 in Airdrie, 41 in Dumbarton and 39 in Kilmarnock to 14 in Aberdeen and Inverness, 11 in Arbroath and 8 in Stirling.

In counties exclusive of large burghs it ranged from 43 in Caithness, 41 in Clackmannan and Kirkcudbright and 38 in Midlothian to 13 in Perth, 10 in Selkirk and 6 in Roxburgh. No deaths of children aged less than one year occurred in the Counties of Kinross, Orkney, Peebles and Sutherland.

The neo-natal rate (deaths of infants under 28 days) was 19 per thousand live births and is 1 below that for the corresponding quarter of 1957.

Causes of Death.—*Principal Epidemic Diseases.*—There were 32 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 518 fewer than in the fourth quarter of 1957, when an epidemic of influenza caused 539 deaths. The death-rate for this group is 2 per 100,000 of population, and the average rate is 12. These deaths include 8 from menin-

gococcal infections, 2 from measles and 22 from influenza. There were no deaths from typhoid fever, scarlet fever, diphtheria or whooping cough. In the cities and large burghs 19 areas had no deaths from the principal epidemic diseases and in the rest of Scotland 24 counties had no such deaths.

In addition to the deaths mentioned above, 9 deaths were registered from acute poliomyelitis. There were 5 deaths from this cause in the previous quarter and 3 in the corresponding quarter of 1957.

Tuberculosis.—The 194 deaths from all forms of tuberculosis are 32 fewer than in the fourth quarter of 1957. 182 were ascribed to tuberculosis of the respiratory system and 12 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 15 per 100,000, that from respiratory tuberculosis being 14. Both rates are 2 below that for the corresponding quarter of 1957. The rates from all forms and from the respiratory form are respectively 4 and 3 below the average.

Cancer.—Deaths from this cause numbered 2,823 and equal a rate of 216 per 100,000. These deaths are 95 more than in the fourth quarter of 1957, and the rate is 6 higher than in that quarter.

Respiratory Diseases.—Deaths from bronchitis numbered 619 and from pneumonia (excluding pneumonia of the newborn) 482. The corresponding death-rates per 100,000 population are 47 and 37, which are appreciably above the average rate of 38 in each case.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 8, and are equal to a rate of 0·3 per thousand live births. This rate is 0·4 below that for the corresponding quarter of 1957 and 0·3 below the average. Including stillbirths the maternal death-rate is 0·3 per thousand.

Violence.—Deaths from violence (i.e., deaths not due to natural causes) numbered 709, and are equivalent to a death-rate of 54 per 100,000 of the population. In the corresponding quarter of 1957 the number was 737 and the rate 57.

276 of the deaths were from accidents in the home, and 173 were attributed to road transport accidents. The numbers are subdivided by causes, broadly grouped and by sex and age, in the following table.

Deaths from Accidents in the Home by sex and age—quarter ended

The death-rates from the main causes of death in the fourth quarter of 1958 are indicated in the following table. The comparable rates in the fourth quarter of 1957 and the average rates for the fourth quarters of the years 1953-1957 inclusive are also given.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

OCTOBER, 1958

October continued mild with periods of rain alternating with periods of sunshine, but with a more settled period from the 21st to the 27th when a large anticyclone moved slowly east across the Southern half of the British Isles.

Recorded temperatures were above average everywhere by from 1° to 3°F. with day maxima around the middle fifties and minima from 40° to 45°F. The mildest days were at the beginning of the month, around the 8th and from the 20th to 24th. Among the highest temperatures recorded were 68°F. at Balmoral on the 23rd, 66°F. at Gordon Castle on the 8th, and 65°F. at Lossiemouth (8th), Kinlochewe (2nd and 4th) and Craibstone (23rd). The coldest days occurred between the 10th and 19th mainly around the 16th and on the 31st with the maximum temperature in some places only 45°F. Among the lowest night minima recorded were 22°F. at Garve, Ross-shire, 25°F. at Carnwath and Castle Douglas, and 26°F. at West Linton all on the night of 17th/18th. There was ground frost at one place or other on 26 days, being most widespread on the 6th, 12th, 18th and 31st. A thermometer exposed on the ground recorded 18°F. at Achaglachgach, Argyll, on the 18th.

Sunshine was above average in most Eastern districts with large excesses in Fife and Angus where the total duration of bright sunshine was about $1\frac{1}{2}$ times the October average. In the West and South sunshine aggregates were generally below average, except at Stornoway where there was a slight excess. The sunniest places were Dunbar (155 hours), Leuchars (143), Arbroath (141).

Rainfall was below average everywhere South of the Great Glen and also at Stornoway and Cape Wrath. In some places near the East coast as far North as the Moray Firth, there was less than half the average October rainfall and in Midlothian and Eastlothian there was just under one-third of the October average. At North Berwick, with a monthly total of 0.86 inches, there have been only two drier Octobers since records began in 1922, 1946 (.68 inches) and 1951 (.24 inches). Elsewhere in Inverness-shire and Northwards including Orkney, there was a slight to moderate excess with up to 40 per cent more than the average rainfall for October. Rainfall was most persistent in the first half of the month and persistent rainfall continued in the second half of the month in the North and Northwest except for the 25th to 27th which were mainly dry. In the East and South it was mainly dry in the second half of the month except for the 18th to 20th and the 28th to 31st. Among the heaviest falls recorded were 2.63 inches at Onich, 2.57 inches at Kingairloch and 2.33 inches at Fort William, all on the 9th.

Thunderstorms were reported at one place or other on 10 days, a high frequency for October, and the frequency of gales (17 days) was also above average.

Fog was reported at one place or other on 12 days which was near to average for October.

Meteorological Notes—continued**NOVEMBER, 1958**

Though unsettled at times in the first half of the month, anticyclonic conditions predominated in the second half. Over the country as a whole the month was dry and rather mild, but with the foggy cloudy conditions which persisted over much of the country in the second half of the month, rather dull.

Day maximum temperatures were generally between 45° and 50°F. and night minima between 35° and 40°F. Temperatures were higher generally in the West than in the East, especially in coastal districts. The highest day temperatures occurred in the first few days and between the 15th and 17th, 61°F. being recorded on the 15th at Balmoral and Faskally, Pitlochry, and also at Gordon Castle on the 15th and 17th. The coldest days were from the 9th to the 13th and the last few days the maximum day temperature at Braemar being only 29°F. on the 27th. Among the lowest night minima recorded were 15°F. at Kinraig, 17°F. at Glenlivet and 19°F. at Dalwhinnie and Grantown-on-Spey, all on the 13th. Ground frost occurred at one place or other on all days of the month, and notably low temperatures recorded by thermometers exposed on the ground were Glenlivet (7°F.) and Dalwhinnie (9°F.), again on the 13th.

Rainfall in most areas was less than 50 per cent. of the average for November; in some Western coastal districts however, there was up to 60 per cent of average and at Benbecula 66 per cent. In Kincardineshire and South Aberdeenshire less than 20 per cent. of the average for the month was recorded.

Most of the rainfall occurred in the first half of the month, though there were some dry days as on the 3rd and 10th which were dry in most areas. The heaviest rain occurred on the 1st, 4th and 11th; many heavy falls of over one inch in 24 hours were recorded on the 1st and a few more isolated falls of this kind on the 4th and 11th, all in West and Southwestern districts. The heaviest fall reported was 1.50 inches at Rhum on the 1st.

Sleet and snow was recorded in some areas mainly between the 8th and 13th. From about the middle of the month onwards it was almost completely dry in most areas. At Braemar it was the driest November since 1867 and at Balmoral the driest since records began there in 1882.

Over the greater part of the country sunshine totals were below average, but in the Moray Firth area, and North of the Great Glen many places had a large excess. Among the sunniest places were Forres (79 hours), Nairn (75 hours), Elgin (73 hours), Fortrose (73 hours) and Wick (70 hours).

Fog occurred at one place or other everyday except the 2nd and 3rd, the highest frequency for at least 25 years.

There was a very low frequency of gales which occurred only in the West and North and there were no reports of thunderstorms.

Meteorological Notes—*continued***DECEMBER, 1958**

A mild, calm, foggy spell in the first few days gave way to generally unsettled weather, rather variable as regards sunshine and rainfall with both fogs and gales above average. Mainly rather cold with moderate snow falls in some areas.

In most places temperatures were one to two degrees below the December average. The mildest days were from the 1st to the 4th, 20th to 23rd, and in the South the 27th and 28th. The highest temperature recorded was 54°F. at Glenbranter on the 20th and at Largs and Colmonell on the 28th. The coldest days were mainly between the 10th and 14th. The maximum temperature recorded at Dalwhinnie on the 10th was 27°F. and at several places maxima on that day were around freezing. The coldest nights occurred on the 6th, 7th and between the 10th and 14th. Among the lowest night minima were 8°F. at Kincaig and 11°F. at Glenlivet and Balmoral all on the 14th. Thermometers exposed on the ground recorded 5°F. at Dalwhinnie and 7°F. at Cannich also on the 14th.

Sunshine was rather variable with a tendency for inland areas to have less than the December average while in other areas mainly around the coasts, there was a moderate excess. Among the highest totals recorded were Leuchars with 55 hours, Sourhope (Cheviot Hills) with 54 hours, and Arbroath, Dundee and Dunbar with 53 hours.

In the Eastern half of the country, and in the lower Clyde valley, South-west Argyll and Wigtown rainfall was above average with a large excess in Eastern coastal districts. Around the Tay Estuary and in South Berwickshire there was more than twice the December average. Rainfall was up to 30 per cent. less than the December average in the North west, and in the West from the area round the Beaully Firth to most of Argyll and also in a large area of South west Scotland. In the East the wet periods were the second and last weeks, rainfall being more scattered and intermittent in the first week and from the 17th to 24th. In the West there was heavy rain in the period 10th to 12th, and from the 18th to 31st rainfall was again persistent and heavy at times, on the other days of the month rainfall was lighter and intermittent. Much of the excess rainfall in the East was caused by the heavy falls on the 14th. Among the heaviest were 3.51 inches (Strathyre), 2.38 inches (Kippen), 2.35 inches (Milnathort) all on the 14th. Many heavy falls of over 1 inch occurred in the West on the 12th. At Perth and Loch Leven Sluice it was the wettest December since 1915. There were moderate falls of snow in the second week with snow lying several inches deep in hilly inland districts. There were also some lighter falls in the last week.

Fog occurred at one place or other every day except the 11th, the highest frequency for at least 25 years. It was most widespread in the first and last weeks, especially the 24th and 25th. The number of gales and thunderstorms was also above average.

TABLE 1.—BIRTHS, STILLBIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES OF CITIES, LARGE BURGH AND COUNTIES OF SCOTLAND,
